Census of Population

PC80-S1-2

Population and Households by States and Counties: 1980

This report presents 1980 census counts of the number of persons in households and in group quarters, the number of households, and the average number of persons per household for the 50 States and the District of Columbia, counties, and independent cities.

The 1980 census figures for the total United States, not shown in the table, are as follows: persons in households, 220,762,922; persons in group quarters, 5,741,903; number of households, 80,376,609; and average number of persons per household, 2.75. The number of persons in households increased by 12 percent over 1970 (197.4 million), while

the number of households increased by 27 percent (63.4 million in 1970), resulting in a decline in average household size from 3.11 persons per household in 1970 to 2.75 in 1980.

In 1980, California had the largest number of households (8,630,198), followed by New York (6,339,762) and Texas (4,928,965). California also had the largest population in households (23,100,636) and in group quarters (567,926). However, Utah and Hawaii had the largest average household size (3.20 and 3.15 persons per household, respectively), while the District of Columbia and Florida had the smallest

size (2.39 and 2.55, respectively).

Most of the statistics presented here are being issued in advance of their separate publication in the final reports, *Characteristics of the Population, Number of Inhabitants*, PC80-1-A; and *Characteristics of the Population, General Population Characteristics*, PC80-1-B.

An outline of the publication and computer tape program for the 1980 Census of Population and Housing can be obtained free of charge from the Data User Services Division, Bureau of the Census, Washington, D.C. 20233.

Symbol used in table. A dash "--" represents zero.

Area Classifications and Definitions

States. The 50 States and the District of Columbia are the constituent units of the United States.

Counties. In most States, the primary divisions are termed counties. In Louisiana, these divisions are known as parishes. In Alaska, which has no counties, the county equivalents are the organized boroughs together with the "census areas" which were developed for general statistical purposes by the State of Alaska and the Census Bureau. In four States (Maryland, Missouri, Nevada, and Virginia), there are one or more cities which are independent of any county organization and thus constitute primary divisions of their States. That

part of Yellowstone National Park in Montana is treated as a county equivalent. The District of Columbia has no primary divisions, and the entire area is considered equivalent to a county for census purposes.

Household. A household includes all persons who occupy a group of rooms or a single room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied as separate living quarters, that is, when the occupants live and eat separately from other persons in the building and have direct access from the outside of the building or through a common hall. The measure "persons per

household" is obtained by dividing the number of persons in households by the number of households.

Group quarters. All persons not living in households are classified by the Bureau of the Census as living in group quarters. Persons in group quarters include persons under care or custody in institutions and persons in noninstitutional group quarters such as college dormitories, military barracks, monasteries, missions, and workers' dormitories. In addition, noninstitutional group quarters include any living quarters which is occupied by nine or more persons unrelated to the resident who owns or rents (maintains) the living quarters (for example, a large rooming or boarding house, or a large commune).
